

*BROCK® WELL-GARD® Discharge Guard*

**CTB**  
Dedicated to  
PRODUCT  
LEADERSHIP™

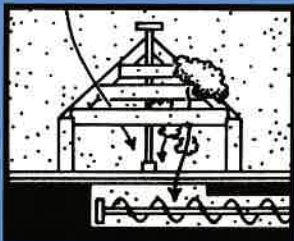

*Helps stop bridging and blocking of discharge well*

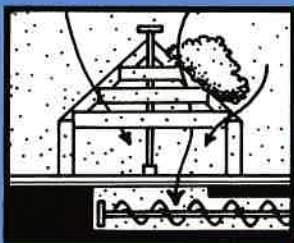

*Discharge Guard for On-Farm Grain Bins*

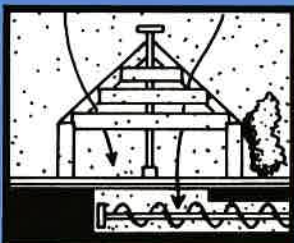

*Discharge Guard for Commercial Grain Bins*

*Cuts or breaks up chunks of grain threatening to block discharge well.*

*Stops chunks of grain that won't break up. Allows grain to flow around chunk.*

*Moves grain chunks down and away from well opening.*

**B**rock's unique WELL-GARD® Discharge Guard will help insure a continuous flow of grain out of the bin – even grain containing frozen or compacted chunks. By guarding the entire area of the well opening, WELL-GARD limits the bridging and blockage caused by these chunks of grain.

WELL-GARD is designed to cut up or break up chunks threatening to block the discharge well of the bin. The pyramid-shaped guard is also engineered to stop chunks that will not break up, allowing grain to continue flowing around the chunk and into the well.

WELL-GARD is constructed of heavy galvanized, welded steel for a long, rust-resistant life. The guard attaches to the discharge well to prevent dislodging during the filling of the bin. Yet, the guard can easily be removed to permit the installation of a sweep auger.

WELL-GARD – it's a unique, simple, inexpensive solution to a potentially serious and annoying grain handling problem.
